

Regulatory Support & Novel Foods

When bringing new ingredients to market or completing re-submissions to meet ever changing regulatory requirements, we understand that the constantly shifting regulatory rules are challenging.

Our specialist team interprets complex dossier requirements and carries out the right analysis to give your regulatory submission the best chance of success. We provide an integrated service designed to guide you through the regulatory process. We don't just tell you what analytical data you need to provide, we also have the experience and technical capabilities to deliver it.

Our regulatory service includes:

- Regulatory strategy consultancy including gap analysis to define the science required and testing to conduct
- Evaluation of ingredients in relevant model food systems
- Development and validation of analytical methods for new chemical entities
- Product characterisation testing
- Stability studies of new ingredient itself and in-use in food matrices
- Unique internal process to evaluate the sensory characteristics of unapproved ingredients
- Assessment of particle size for nano-material characterisation

‘RSSL understood the complex regulatory landscape and their experts helped to gather the right scientific data for our submission.’
